

Ankit Gupta

Full Stack Developer

 ankitgupta0429@gmail.com  +91 9305540748  Barabanki, Uttar Pradesh  GitHub  LinkedIn

 Portfolio

Summary

Full Stack Developer with professional experience building and deploying production web applications across frontend and backend systems. Experienced in developing scalable REST APIs and layered backend architectures with Node.js, Express.js, and PostgreSQL, alongside building responsive interfaces and complete frontend flows with React.js, Next.js, and Tailwind CSS. Skilled in authentication, real-time systems, asynchronous processing, database optimization, and AI integrations, with hands-on experience taking features from development through testing and deployment.

Education

Masai School, *Full-Stack Web Development* 2025 – 2026

SR Institute of Management & Technology, Lucknow, *Bachelor of Technology, Information Technology* 2021 – 2025

Technical Skills

Programming Languages – JavaScript (ES6+), TypeScript, Python, Java, **Frontend** – React.js, Next.js, Redux Toolkit, Tailwind CSS, HTML5, CSS3, SCSS, **Backend** – Node.js, Express.js, REST APIs, JWT, Socket.IO, BullMQ, **Databases** – MongoDB, PostgreSQL, Redis, Firebase/Firestore, **Cloud & Version Control** – AWS S3, CloudFront, Git, GitHub

Experience

Unlox  , *Full Stack Developer* May 2026 – Present | Bengaluru, Karnataka

- Contributed to Taddle Box backend development using Node.js, Express.js, and PostgreSQL, following a layered architecture with routes, controllers, services, and data-access layers; developed REST APIs with JWT authorization, Zod validation, rate limiting, CORS, Helmet, and parameterized queries.
- Contributed to Redis + Socket.IO notifications with caching and batching for likes, comments, and follows, and implemented BullMQ to do background jobs for emails, notifications, and database persistence.
- Implemented personalized feeds using PostgreSQL joins, filtering, aggregation, UUID-based cursor pagination, and user interaction signals such as follows, communities, tags, preferences, engagement, and freshness.
- Contributed to PrepFree frontend development using Next.js and Tailwind CSS, building reusable UI components and frontend flows as part of a collaborative development team.
- Worked across the full-stack development lifecycle, collaborating with teammates to implement, test, and refine application features.

Projects

NovaAI, – *AI Chatbot* Mar 2026 – Apr 2026
Project Source ([GitHub](#)  / [Demo](#) )

- Built and deployed the frontend and backend of a full-stack AI chat application on Vercel using MongoDB, Express.js, React.js, Redux Toolkit, and Axios, implementing end-to-end chat workflows and client-side state management.
- Integrated Gemini AI through the Express backend, passing conversation history for contextual multi-turn interactions, with asynchronous request handling, API/5xx error handling, and frontend loading states.
- Designed reusable React component architecture using URL-based rendering and Redux Toolkit state management, reducing duplicated UI logic across dynamic content views.

ShopNow, – *E-commerce Website* Mar 2025 – May 2025
Project Source ([GitHub](#)  / [Demo](#) )

- Built and deployed the frontend and backend of a full-stack e-commerce platform on Vercel using MongoDB, Express.js, React.js, and Node.js with product browsing, category filtering, authentication, and persistent cart management.
- Designed a layered backend architecture separating routes, controllers, services, and models, with JWT-based authentication, RESTful APIs, request validation, and structured error handling.
- Improved product discovery with debounced search, pagination, and category filtering, reducing redundant API requests and improving frontend responsiveness.

Investment Portfolio Tracker, – *Finance Tracker WebApp* Nov 2025
Project Source ([GitHub](#)  / [Demo](#) )

- Built and deployed a real-time investment portfolio dashboard on Vercel using React and Firestore real-time listeners to synchronize asset and portfolio data as changes occurred.
- Designed Firestore data models for user-specific portfolios and investment records, structuring document relationships to support efficient dashboard queries.
- Developed interactive financial visualizations using Recharts to present portfolio performance, allocation, and market trends.
